Supported Local Core WebEOC Boards

After Actions Board (Version 1.0)	Incident Based

Description: The After Actions board is used to record observations and suggestions for WebEOC and EOC operations.

Views: This board provides a list view and an input view for recording after action comments for the default user population and provides a secondary display/input for the OEM team to record actions taken.

List View – This view lists all after action comments made for the accessed position.

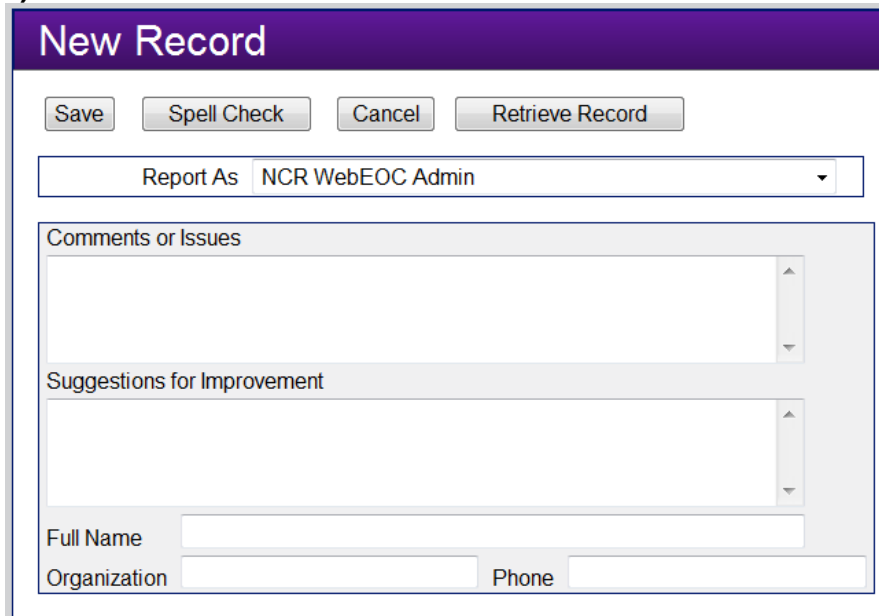

Default Features

There are currently no special features for this display view.

Variations: None

Input (Edit) View – This view enables the user to make after action comments.

Default Features

- Spell Check button to ensure correct spelling.

Variations: None
