Supported Specialty WebEOC Boards

Incident Creator Board	(Version 1.0)	*Incident Independent*

Description: This board provides a mechanism to create incidents without accessing the WebEOC Admin panel. It walks the user through field selections to build consistent, descriptive incident names. This board builds a record of incidents with additional tracking information. Finally, this board also enables the user to create a contact list for emailing an individual or group that an incident has been created.

Views: This board offers one main list view that lists all created incidents. A separate list is accessible to build the contact list.

List View - This view lists the Incidents created.

Default Features:

- New incident creation through the *Create New Incident* button
- Record editing or updating through the *Update* button
- Record viewing through the *Details* button
- Search capability on the Incident Name, Activation Type, Activation Level, and Activation Summary fields
- Filtering of data by Jurisdiction, Activation Type, and Activation Level.

Variation 1: City of Fairfax's version does not have the jurisdiction field.
